Our customer service team will review your report and will be in touch. Sometimes the generated worksheet is not exactly what you want. If you're behind a web filter, please make sure that the domains *.kastatic.org and *.kasandbox.org are unblocked. Just try again! To get a different worksheet using the same options: PDF format: come back to this page and push the button again. If you want the answer to be a whole number, choose "perfect squares," which makes the radicand to be a perfect square (1, 4, 9, 16, 25, etc.). If you choose to allow non-perfect squares, the answer is typically an unending decimal that is rounded to a certain number of digits. For example, an answer of √28 will be given in simplified form as 2√7. Want to help support the site and remove the ads? To get the worksheet in html format, push the button "View in browser" or "Make html worksheet". Basic instructions for the worksheets Each worksheet is randomly generated and thus unique. Options include the radicand range, limiting the square roots to perfect squares only, font size, workspace, PDF or html formats, and more. Become a patron via patreon or donate through paypal. This option is useful for algebra 1 and 2 courses. You can also make worksheets that include one or two other operations, besides taking a square root. The option "Only simplify, no answers as decimals" forces the answer NOT to be given as a rounded decimal, but instead the answer is simplified if possible, and the square root is left in the answer if it cannot be simplified. The answer key is automatically generated and is placed on the second page of the file. Html format: simply refresh the worksheet page in your browser window. Detailed solutions are provided.
